

## HELLO™ *one click - one meeting*

Cables sticking out right and left, missing drivers and a very, very frustrated CEO that had to give up on his videoconference with the board last night... Does any of this sound familiar?

Why do battle with "old-hat" endpoint-to-endpoint conferencing systems, when there is a better solution out there? Put Hello software on top of a Lync or Skype For Business client in the meeting room, and your users will experience blissful user-friendliness – regardless of technical ability and prior training.

Hello™ provides a "One click, No nonsense", way of Skype For Business enabling the conference room. Hello is a software-only solution. This keeps your options open to select your favored brand of hardware, or simply use what is already available.

When we say user friendly, we really mean it! Just book your Skype meeting in Exchange – Invite participants (as well as the Hello enabled meeting room) and press send. When you enter the meeting room all you need to do is press the "Start Meeting" button, and the meeting starts!

Hello™ does not come with an expensive pricetag. The solution comes in two versions, Standard og Enterprise, both at a reasonable price. All you need to get started is Hello™, a screen, a webcam and a mini PC.
